

Yapta's dynamic price assurance technology enables you to act on price drop alerts for airfare savings either manually or automatically.

With Yapta's auto-reticketing capability, you can increase conversion rates, boost savings and reduce your agent support costs, without disrupting the traveler's experience.

Time savings

Yapta's technology can immediately rebook, reissue, and void original air tickets within the GDS 24x7, without waiting for an agent to review or the need to extend office hours.

Happy travelers

Using FareIQ functionality and preconfigured automation criteria, itineraries selected by travelers (date, time, carrier, and flight) are preserved, and TMC-specified seat handling is applied.

Better bottom line

With Yapta's automated capability, conversion of in-void window savings increases to 80-95%, realized savings increases by 30% and agent cost decreases by 35%.

How air auto-reticketing works

Yapta can automatically re-ticket reservations without the need of an intermediary agent. Only acting upon "like for like" fares including penalty, refundability status and branded fare amenities, Yapta automatically retickets in-void window PNRs in your TMC's PCC. Yapta then voids the original ticket, documents the PNR, and rebooks the original confirmed seats as available. Your TMC continues to maintain complete insight into all transactions.
